Better relief for Arthritics—minimum side effects

In salicylate therapy BUFFERIN (Antacid Analgesic) has these two special advantages. It is *faster-acting*—twice as fast as ordinary aspirin. It is *better-tolerated*—even in large doses, as for arthritis.

According to a British survey, as many as 42% of arthritics are intolerant to aspirin. And in a blind trial among arthritics with a *proved* intolerance to aspirin, 70% had no gastric symptoms after taking large doses of BUFFERIN over periods of 4 to 16 months. (1)

In clinical tests, it was shown that BUFFERIN raises the salicylate blood level of humans more than 20% higher in *ten* minutes than ordinary aspirin does in *twenty* minutes.

Hence the importance of BUFFERIN in all salicylate therapy. Only BUFFERIN contains the antacid agents which:—

- ★ reduce gastric upset to a negligible minimum (2) (3);
- ★ actually speed the pain-relieving ingredient into the bloodstream (4) (5).

It acts faster. It is better tolerated. It contains no sodium.

A new approach to the treatment of Rheumatoid Disease

RECENT WORK has shown that chloroquine administered in small daily doses (1-2 tablets 'Avloclor') can produce good to excellent results in the control of rheumatoid disease, particularly rheumatoid arthritis. The treatment is safe

and free from serious side-effects. Moreover, unlike the steroids, it has the advantage that it can be given over a prolonged period without influencing the adrenal, the pituitary, or any other internal function.

'Avloclor' *Chloroquine Phosphate B.P.*

Issued in bisected tablets of 0.25 gramme
(equivalent to 0.15 gramme base)

For the longest relief by the safest route

'CODELCORTONE'-T.B.A. produces a local anti-inflammatory action that is both greater and of longer duration than with other steroids given by intrasynovial injection. Moreover, it is effective in many patients who are refractory to hydrocortisone acetate.

'CODELCORTONE'-T.B.A., given intrasynovially or injected into soft tissues, does not cause systemic side-effects.

INDICATIONS: Rheumatoid arthritis, osteoarthritis, traumatic arthritis and acute gouty arthritis.

DOSAGE: Usual frequency of injection is once every 2 to 4 weeks or longer. Dose varies with the size of the joint or bursa, and the severity of the condition. Knee joint 20-30 mg.; smaller joints 7.5-10 mg.

HOW SUPPLIED: Vials of 5 ml., each ml. containing 20 mg. prednisolone tertiary-butylacetate.

SUSPENSION

CODELCORTONE-T.B.A.

For home massage and relief of local rheumatic pain

Algesal is unique in containing *no counter-irritant*. It is suitable for repeated application by the patient at home, since it will not irritate or redden the skin.

The single, active ingredient is a non-irritating, skin-penetrating salicylate, carried in a soothing white vanishing cream with a pleasant smell of lavender.

INDICATIONS: Fibrositis or muscular rheumatism, osteoarthritis, backache due to lumbo-sacral strain, tenosynovitis, frozen shoulder and local tissue pain after injury or exercise.

*Algesal balm gives
symptomatic relief in
osteoarthritis of the knee*

Algesal

10%, diethylamine salicylate in a soothing vanishing cream

★ Tear-off pads of leaflets describing a rational home treatment and simple exercises for osteoarthritis of the knee are available for handing to patients. Other leaflets dealing with lumbo-sacral strain and frozen shoulder are also available. Further leaflets are in preparation.
