

CHRYSOTHERAPY

in Rheumatoid

Arthritis

THE high therapeutic activity and low toxicity of 'Solganal B Oleosum' render it an acceptable form of gold medication. Its oily suspension is administered intramuscularly and the resultant gradual absorption obviates the unpleasant sequelae so often a feature of chrysotherapy.

In line with the latest clinical results the dosage scheme has been amended to ampoules of 0.01, 0.02, 0.05 and 0.1 gm.
