PsAID9 SCORING AND CALCULATION RULES

The PsAID is calculated based on 9 Numerical rating scales (NRS) questions. Each NRS is assessed as a number between 0 and 10.

1. Calculation

PsAID final value =
   (PsAID1 (pain) NRS value (range 0-10) x 0.174) + (PsAID2 (fatigue) NRS value (range 0-10) x 0.131) + (PsAID3 (skin) NRS value (range 0-10) x 0.121) + (PsAID4 (Work and/or leisure activities) NRS value (range 0-10) x 0.110) + (PsAID5 (function) NRS value (range 0-10) x 0.107) + (PsAID6 (discomfort) NRS value (range 0-10) x 0.098) + (PsAID7 (sleep) NRS value (range 0-10) x 0.089) + (PsAID8 (coping) NRS value (range 0-10) x 0.087) + (PsAID9 (anxiety) NRS value (range 0-10) x 0.085)

Thus, the range of the final PsAID value is 0-10 where higher figures indicate worse status.

2. Missing data imputation

If one of the 9 NRS values composing the PsAID is missing, the imputation is as follows:
   a. calculate the mean value of the 8 other (non-missing) NRS (range, 0-10)
   b. impute this value for the missing NRS
   c. Then, calculate the PsAID as explained above.

If 2 or more of the NRS are missing, the PsAID is considered as missing value (no imputation).

Final PsAID out of 10
Add up the □ and divide by 20:
PsAID12 SCORING AND CALCULATION RULES

The PsAID is calculated based on 12 Numerical rating scales (NRS) questions. Each NRS is assessed as a number between 0 and 10.

3. Calculation

PsAID final value =
\[(\text{PsAID1 (pain) NRS value (range 0-10) } \times 3)\]
\[+ (\text{PsAID2 (fatigue) NRS value (range 0-10) } \times 2)\]
\[+ (\text{PsAID3 (skin) NRS value (range 0-10) } \times 2)\]
\[+ (\text{PsAID4 (Work and/or leisure activities) NRS value (range 0-10) } \times 2)\]
\[+ (\text{PsAID5 (function) NRS value (range 0-10) } \times 2)\]
\[+ (\text{PsAID6 (discomfort) NRS value (range 0-10) } \times 2)\]
\[+ (\text{PsAID7 (sleep) NRS value (range 0-10) } \times 2)\]
\[+ (\text{PsAID8 (coping) NRS value (range 0-10) } \times 1)\]
\[+ (\text{PsAID9 (anxiety) NRS value (range 0-10) } \times 1)\]
\[+ (\text{PsAID10 (embarrassment) NRS value (range 0-10) } \times 1)\]
\[+ (\text{PsAID11 (social life) NRS value (range 0-10) } \times 1)\]
\[+ (\text{PsAID12 (depression) NRS value (range 0-10) } \times 1)\]

The total is divided by 20.

Thus, the range of the final PsAID value is 0-10 where higher figures indicate worse status.

4. Missing data imputation

If one of the 12 NRS values composing the PsAID is missing, the imputation is as follows:
\[\text{a. calculate the mean value of the 11 other (non-missing) NRS (range, 0-10)}\]
\[\text{b. impute this value for the missing NRS}\]
\[\text{c. Then, calculate the PsAID as explained above.}\]

If 2 or more of the NRS are missing, the PsAID is considered as missing value (no imputation).
