

# NEURO-MUSCULAR PAIN

The pains of fibrositis, myositis and sub-acute rheumatism, are all exacerbated in damp weather and call for a safe and efficacious anodyne.

Frequent administration necessitates the choice of a medication which is not cumulative, or tending towards habit-formation or over-dosage.

'ANADIN' TABLETS produce their effect by a judicious combination, in small but adequate quantities, of four proven anodyne and analgesic drugs, acetphenetidin, acetylsalicylic acid, caffeine alkaloid and quinine sulphate.

There is in this way no risk attached to repeated administration. The quinine and caffeine maintain cardiac tone and diuresis, in addition to contributing an antipyretic factor.

## FORMULA

<i>Acetphenetidin</i>	-	-	3 gr.
<i>Ac. Acetylsalicylic-</i>	-	-	3 gr.
<i>Caffeine Alkaloid-</i>	-	-	$\frac{1}{4}$ gr.
<i>Quinine Sulphate</i>	-	-	$\frac{1}{4}$ gr.

*Samples for clinical trial will be sent on request.*
