

SOLGANAL B OLEOSUM IN RHEUMATOID ARTHRITIS

After 15 years' clinical experience, there is now no doubt as to the great value of gold in this disease. Aitken¹, in a masterly summary of the present position of the treatment of rheumatoid arthritis, states "to these physical and psychological measures modern practice adds no vaccines and no important drugs except gold," while Sundelin² in a review of 3,800 cases reported in the literature showed that marked improvement was obtained in 40% to 95% of cases, an average of 67%.

There is equally no doubt that Solganal B Oleosum is an admirable preparation. It was responsible for many of the successes reported in the literature and it is noteworthy that in a recent series of 122 cases treated with it, Cohen & Dubbs³ obtained by far the lowest percentage of toxic effects yet recorded.

'Tabloid' TRADE MARK
'IODICIN' MARK
 Calcium Iodo-ricinoleate

'Iodicin' may be given in all conditions in which iodide therapy is employed. In chronic rheumatism, gout, fibrositis, sciatica and intercostal neuralgia it has a beneficial resolvent action on the inflamed tissues. The compound is absorbed without gastro-intestinal irritation and in most cases dosages up to gr. 60 daily may be given without giving rise to symptoms of intolerance.
