

Gold Therapy

IN RHEUMATOID ARTHRITIS.

' . . . the brilliant results that can be obtained, even in the most severe and chronic cases, will justify gold therapy in a disease that has proved refractory to so many other forms of treatment.'

SOLGANAL B OLEOSUM is perhaps the most satisfactory form of gold medication on account of its maximum therapeutic efficiency and minimal toxicity. It is presented in oily suspension for intramuscular injection—a form which permits of gradual absorption and obviates the unpleasant sequelæ so often a feature of chrysotherapy.

Based on the latest clinical findings, the dosage scheme has been amended to ampoules of 0.01 gm., 0.02 gm., 0.05 gm., and 0.1 gm.

Copy of the new brochure 'Gold Therapy with Solganal B Oleosum' gladly sent on request.

'Solganal B' is the registered name which distinguishes aurothioglucose of British Schering manufacture.

'IODICIN'[®]

CALCIUM IODORICINOLEATE

Whenever systemic iodide therapy is indicated, as in chronic rheumatism, fibrositis, sciatica and allied conditions, 'Iodicin' is to be preferred to the inorganic iodides on account of its superior tolerance and slower excretion. 'Iodicin' contains 33-1/3 per cent of iodine in intimate chemical combination with a fatty acid. After ingestion, this iodised fatty acid is stored in the fat depots of the body, from which the

iodine is slowly liberated at a steady rate. In this way the amount of circulating iodide can be raised to the limits of tolerance and maintained continuously by daily administration.

'TABLOID'[®] AND 'IODICIN'[®] TRADE MARK

Calcium Iodoricinoleate Capsules, gr. 3

Containers of 50 and 250
