

**2nd edition
June 1992**

Rights and Responsibilities provides a practical guide to the law as it affects doctors. It aims to cover the main areas that are of interest and concern to most doctors. Designed as a handbook, the style affords easy access to individual topics and

offers succinct but comprehensive advice. As well as doctors, medical students, health service administrators, lawyers with an interest in medical law, local authority officers, and others with an interest in the legal aspects of medicine will find this book invaluable.

UK £10.95; Abroad £13.00 (BMA members £9.95 or £12.00) including postage, by air abroad.

Please enclose payment with order or send full details of American Express, Mastercard or VISA credit card.

Available from: **BRITISH MEDICAL JOURNAL, PO Box 295, London WC1H 9TE, major medical booksellers or the BMJ bookshop in BMA House.**

**CAROL-NACHMAN
AWARD FOR
RHEUMATOLOGY – 1994
WIESBADEN – GERMANY**

This international prize will be awarded annually for excellent researches in the field of rheumatology. It is endowed with

DM 75.000

Submission of work may be made up to November 30, 1993.

Further information is available from

Prof. Dr. med. D. Maas
Rheumaklinik I, Langgasse 38/40
D-6200 Wiesbaden/Germany

MAIL ORDER SERVICE

Located in London, the BMJ Bookshop stocks a comprehensive range of medical titles, including a wide selection of student text books.

We offer a fast and efficient mail order service and books are despatched post free within the UK (overseas customers should add 15% for postage and packing).

Any books in stock will be despatched within 24 hours of receiving your order with payment.

BMJ BOOKSHOP

Any practice, library, institution, hospital or company that would be interested in opening an account with us should contact David Clifton or Peter Elliot for further details.

When using your credit card to pay for an order, by telephone, fax or letter please quote your card number and expiry date.

How is no longer a problem — but there's still which and why

The microcomputer revolution has made powerful machines and highly complex programs generally available. This means that users of statistical techniques need no longer be concerned with the arithmetical and algebraic details — the software will take care of all that. What is vital, however, is to understand the ideas and the basic principles of statistical analysis. In *Medical Statistics on Microcomputers* R A Brown and J Swanson Beck show how to get the best use out of microcomputers when analysing data, particularly in the pathology laboratory. They explain the rational basis of various widely applicable statistical methods and also indicate their limitations so that you can make an informed choice. Chapters include:

- Data handling
- Analysis of data from one or two groups
- Comparison of several groups
- Analysis of categorical data
- Statistical methods for diagnostic tests.

UK £8.95; Abroad £10.50; US\$25.00
 BMA members: £8.45 or £10.00
 ACP members: US\$21.00

Let the *BMJ* guide you through statistics:

STATISTICS WITH CONFIDENCE — Confidence intervals and statistical guidelines. Martin J Gardner, Douglas G Altman.

Many medical journals, including the *British Medical Journal*, now expect scientific papers submitted to them to contain confidence intervals when appropriate. Why? what are they? and how do you calculate them? *Statistics With Confidence* tells you. A clear explanation of the reasons for using confidence intervals is followed by detailed presentation of methods of calculation, including numerous worked examples and specially compiled tables. To make things even easier, a computer programme, Confidence Interval Analysis (CIA), for calculating confidence intervals, has been specially designed by Martin Gardner and details are available from the Publishing Department, *British Medical Journal* (or the American College of Physicians).

UK £8.95; Abroad £10.50; US\$23.00 BMA members £8.45 or £10.00 ACP members US\$19.00

STATISTICS AT SQUARE ONE — T D V Swinscow

The statistical testing of data is indispensable in many types of medical investigation and a help on countless occasions in clinical practice. This book provides step by step instruction. Subjects covered include standard deviation, X^2 tests, t tests, non-parametric tests, and correlation. The book includes sections on Fisher's exact probability test and rank correlation. Methods specially adapted to pocket calculators.

UK £3.95; Abroad £5.00; US\$13.00 BMA members £3.45 or £4.50 ACP members US\$11.00

STATISTICS IN PRACTICE — Sheila M Gore, Douglas G Altman

No doctor can afford to ignore statistics: most modern medical research uses statistics. This important and authoritative book provides clear information on designing studies, applying statistical techniques, and interpreting studies that use statistics. It can be easily understood by those with no statistical training and should be read by all those who want to keep abreast of new developments.

UK £8.95; Abroad £11.00; US\$23.00 BMA members £7.95 or £10.00 ACP members US\$19.00

EPIDEMIOLOGY FOR THE UNINITIATED — Geoffrey Rose, D J P Barker

Epidemiology has its own techniques of data collection and interpretation and its necessary jargon of technical terms, and in *Epidemiology For The Uninitiated* the authors guide the novice expertly through the theory and practical pitfalls. The second edition of this popular *BMJ* handbook has been revised to include further details of epidemiological methods and some of their more dramatic applications, such as the investigations on the Spanish cooking oil epidemic, and AIDS.

UK £4.95; Abroad £6.00; US\$14.00 BMA members £4.45 or £5.50 ACP members US\$12.00

Clinical and Experimental RHEUMATOLOGY

An independent, international journal conveying the latest in the field of rheumatology

Editors: Stefano Bombardieri, MD (Chief) (Italy), Barbara M. Ansell, MD (Pediatric Rheumatology section) (UK),
Graham R.V. Hughes, MD (UK), Haralampos M. Moutsopoulos, MD (Greece), Paul E. Phillips, MD (USA)

CLINICAL AND EXPERIMENTAL RHEUMATOLOGY provides a international forum for both clinicians and scientists wishing to keep up with the latest developments in the field of rheumatology. In addition to *Original Articles*, *Rapid Papers*, and *Case Reports*, every issue contains an *Editorial* and a *Review* designed to update readers on the hottest topics in this complex and rapidly growing field.

We were also the first in our field to introduce a regular section on **Pediatric Rheumatology**.

CLINICAL AND EXPERIMENTAL RHEUMATOLOGY is not the official organ of any professional society and is proud of its editorial independence. Our international editorial board and outside referees provide a fair and careful screening of all articles submitted for publication.

Subscribe now and keep abreast of what's happening around the world in rheumatology! We are offering very special rates for professionals in training, and ACR and EULAR members.

Are the ills of middle and later life rooted in our early development?

During the past few years a series of articles, mostly from the Medical Research Council's Environmental Epidemiology Unit at the University of Southampton, has been published in leading medical journals. They set out the evidence that certain adult diseases, including coronary heart disease, stroke and diabetes originate in impaired development during fetal life and infancy. Because of the obvious implications for prevention of some of the commonest diseases in Western society, they have attracted international attention. In this book, Professor David Barker, Director of the Unit, has selected 31 articles that he considers seminal and a comprehensive guide to the development of this important topic. Professor Roger Robinson's introduction summarises and interprets the evidence for non-epidemiologists.

The first chapters describe the origins of the hypothesis in geographical studies in England and Wales. These are followed by a series of studies of men and women in middle and late life whose early growth was recorded at the time. In those who have died, cause of death can be related to early growth. Examination of the living has allowed blood pressure, blood lipid and insulin concentrations, and other measurements to be related to different patterns of early growth. Together, the findings show that early development affects the risk of coronary heart disease, stroke, obstructive lung disease and diabetes at least as strongly as obesity, smoking and other aspects of adult life style.

Fetal and Infant Origins of Adult Disease brings together in one volume a body of work that cannot be ignored

Hardback • Illustrations • Tables • 368 pages • ISBN 0-7279-0743-3
