

Supplemental Figure Captions

Figure S1: Mean and 95% confidence intervals of total n-3 FA % in RBCs for Control (Ctrl) group, anit-CCP2 positive group, and RF positive group, stratified by shared epitope (SE) group. Dots represent individual values of n-3 FA %.

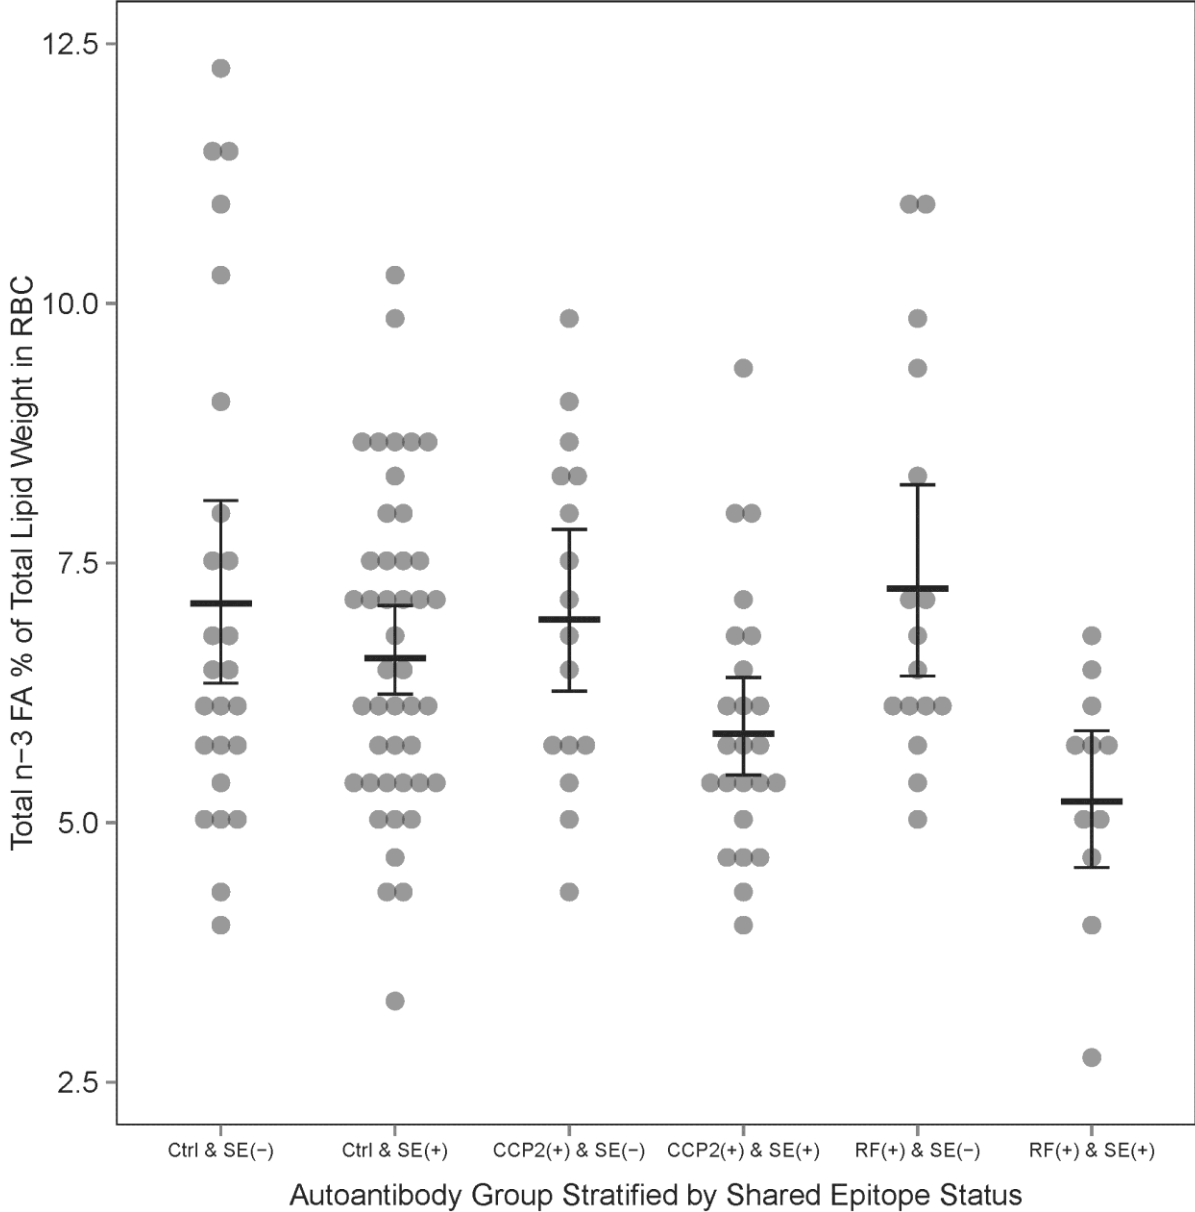

Figure S2: Mean and 95% confidence intervals of total n-3 FA % in RBCs for Control (Ctrl) group, RF positive and anti-CCP2 negative group, anit-CCP2 positive and RF negative, and both anti-CCP2 and RF positive group. Results were not stratified by shared epitope group due to the small number of participants who were positive for both anti-CCP2 and RF. Dots represent individual values of n-3 FA %.
