

Supplementary Material on T2T gout

Table S1: Eligibility criteria

PICO Strategy:

Population: adult European and US American patients with gout (acute and chronic).

Intervention: use of NSAIDs, colchicine, prednisolone (different application forms), Xanthin-oxidase inhibition, uricosurics.

Control: comparator such as routine treatment, placebo

Outcome: the applied definition of a therapeutic target.

Design: *strategy trial*

- clear outcome target is the primary endpoint and therapeutic consequence of failing to reach the target is predefined
- *targets:* variables as predefined
- *outcomes:* variables as predefined.

Study duration: any meaningful follow-up

Time period: January 2010 to April 2015 (for earlier data use EULAR and ACR recommendation)

Exclusion criteria:

- Diagnosis: chondrocalcinosis, hereditary gouty syndromes, tumor lysis syndrome
- Study setting: retrospective, non-interventional
- Publication form: letters, editorials, reviews.
