Short title: EBV sero-reactivation in lupus transition

Supplementary Table 1. Increasing VCA IgG levels and EA IgG levels correlate with both increasing number of autoantibodies and ACR criteria

	Number of AutoAb	ACR score
	R (p value)	R (p value)
VCA IgG OD ratio	0.15 (0.002)	0.15 (0.002)
VCA IgA OD ratio	0.08 (0.08)	0.008 (0.086)
EA IgG OD ratio	0.22 (<0.0001)	0.15 (0.001)

Supplementary Table 2. Significant interactions were found between variants in IL10 and VCA IgA ISR and variants in CD40 and VCA IgG ISR in the risk of transitioning to SLE.^a

Gene	SNP	Antibody	Transitioned vs.	Transitioned vs.	Non Transition
			Non Transition	Unaffected	vs. Unaffected
			relatives	Controls	Controls
			N=406	N=167	N=470
			OR (95% CI)	OR (95% CI)	OR (95% CI)
			p-value	p-value	p-value
IL10	rs3024505	VCA-IgG	0.29	0.05	0.34
