

Supplementary figure 1: Graph showing DAS28CRP (mean, SD) scores over time in the PreCARA cohort (T2T-cohort) stratified for TNF inhibitor use during pregnancy (any use during pregnancy). The x-axis displays specific time-points before, during and after pregnancy and the y-axis represents mean (SD) disease activity. Disease activity over time did not differ between patients who used a TNF inhibitor during pregnancy (any use during pregnancy) and patients who did not ($p = 0.14$).
