

Retraction: Dominant B cell receptor clones in peripheral blood predict onset of arthritis in individuals at risk for rheumatoid arthritis

Paul Peter Tak, Marieke Doorenspleet, Marjolein de Hair, Paul Klarenbeek, Marian van Beers-Tas, Antoine van Kampen, Dirk Jan van Schaardenburg, Danielle Gerlag, Frank Baas, Niek de Vries.

This article has been retracted.

The editors of *Ann Rheum Dis* have been notified by Professor Paul Peter Tak and Professor Niek de Vries of the Amsterdam University Medical Center, Amsterdam, The Netherlands that they and the other authors of the above article wish to retract the paper.

The authors state:

During follow-up studies to advance our insights into the role of B cell clones during the earliest stage of rheumatoid arthritis (RA), we observed that we could not detect some of the clones that we previously described in subjects at risk of developing RA. After subsequent review of the original data published in *Ann Rheum Dis* 2017;76(11):1924–1930, we detected errors in assignment of clinical data to sequencing data. As a result, we cannot support the conclusions of the article anymore and we wish to retract the publication. Further investigation into the source of the error is ongoing. We communicate our sincere apologies.
