

Supplemental Figure B. Dot plots of external validation of top 15 candidate peptides. SSA- (n=76), sicca controls (n=75), and autoimmune controls (n=41) were compared with Kruskal-Wallis. SjD=SSA- SjD subjects who met 2016 ACR/EULAR criteria for SjD but were anti-SSA antibody negative; sicca controls=subjects with symptoms or signs of dryness but negative ANA, RF, SSA, and FS <1; autoimmune controls=subjects with symptoms/signs of dryness and ANA \geq 1:320, positive RF, or FS \geq 1 on labial salivary gland biopsy but not meeting 2016 ACR/EULAR SjD criteria.
