

Supplementary figure S1. Differential blood cell type estimates for control individuals and patients with primary Sjögren's syndrome (pSS). Boxplots illustrating the estimated cell type fractions in whole blood samples from controls and patients with pSS for CD4+ T cells, CD8+ T cells, CD19+ B cells, natural killer (NK) cells, monocytes and granulocytes.

Supplementary figure S2. Global methylation across all analyzed sites in whole blood, CD19+ B cell and minor salivary gland biopsy samples from control individuals and patients with primary Sjögren's syndrome (pSS). Boxplots illustrating the mean methylation β (beta)-value across all analyzed CpG sites per sample for controls and patients with pSS, (A) in whole blood, (B) in CD19+ B cells and (C) in minor salivary gland biopsies.
