Modality	Symptom duration in months [mean ± SD] in patients with				p-value
	Correct imaging	n	Incorrect imaging	n	
	diagnosis		diagnosis		
XR	90.6 ± 98.5	68	67.3 ± 79.4	36	0.27
CT	82.9 ± 91.7	87	80.59 ± 103.1	17	0.44
MR	85.5 ± 93.8	88	66.2 ± 86.7	16	0.34
XR+MR	86.5 ± 94.2	86	63.8 ± 84.4	18	0.17
CT+MR	81.1 ± 88.4	87	90.1 ± 114.7	17	0.65

Supplement 4 - Symptom duration in relation to the accuracy of imaging diagnosis. The Mann-Whitney U-test was performed for each modality comparing symptom duration in the group with a correct diagnosis with that in the group with an incorrect diagnosis. All tests were non-significant with a tendency towards longer symptom duration in patients with a correct diagnosis in XR and MR. Symptom duration was not available for all patients.
